Dr. M. Mohibbe Azam

(57) Abstract:

The present invention provides a long lasting, non-sticky skin care moisturizing oil-in-water emulsion composition wherein the ingredients more than 95% by weight of the composition are naturally-derived, naturally-processed, safe and biodegradable. The inventive moisturizing composition further provides inter mediate term, long term, and continuous relief of dry skin and its attendant symptoms. The moisturizing composition comprises a) an oil phase containing at least rice bran oil in the range of 7%-20% having high content of gamma-oryzanol, emulsifying agent of vegetable origin, long chain fatty alcohol; b) an aqueous phase containing water, aqueous rice extract, glycerine and other skin benefiting additives. The inventive moisturizing composition is formed when oil phase is added to aqueous phase at elevated temperature under sufficient stirring condition. The skin care composition may also contain a fragrance, and a preservative.
