

RAPID SOIL HEALTH TESTING KIT

Portable, User friendly, Easy to Use & Fast Result

The kit provides rapid testing techniques for soil physical, chemical and biological parameters.

The kit has been designed for on-farm testing by a semi-skilled person for several soil physical parameters, important soil chemical, fertility and biological tests. About 40-50 samples can be performed with one filling. The ease in operation and portability to far flung areas/villages coupled with the kit requiring no electricity/power to operate will be immensely beneficial to the small, marginal, poor farmers and other stake holders. A farmer can generate his own soil health card and soil health assessment and apply the required nutrients accordingly.

Recommended Soils : The kit is useful for neutral, saline and sodic soils of India or any soil having plain, flat or lowland topography/ Landforms
